Logarithm, the exponent or power to which a base must be raised to yield a given number. Expressed mathematically, x is the logarithm of n to the base b if $b^x = n$, in which case one writes $x = \log_b n$. For example, $2^3 = 8$; therefore, 3 is the logarithm of 8 to base 2, or $3 = \log_2 8$. In the same fashion, since $10^2 = 100$, then $2 = \log_{10} 100$.

The power property of the logarithm allows us to write exponents as coefficients: $\log_b x^n = n \log_b x$. Since the natural logarithm is a base- e logarithm, $\ln x = \log_e x$, all of the properties of the logarithm apply to it. We can use the properties of the logarithm to expand logarithmic expressions using sums, differences, and coefficients.
