This paper aims at providing light on this question by modelling an automotive GPU (Jetson TX2), analyzing its microarchitectural parameters against relevant benchmarks, and identifying specific configurations able to meaningfully increase performance within similar cost envelopes, or to decrease costs preserving original performance levels. Overall, our analysis opens the door to the optimization of automotive GPUs for further system efficiency.

Performance analysis, commonly known as profiling, is the investigation of a program's behavior using information gathered as the program executes. Its goal is to determine which sections of a program to optimize. A profiler is a performance analysis tool that measures the behavior of a program as it executes, particularly the frequency and duration of function calls.

Performance tuning - Wikipedia

Web performance optimization occurs by monitoring and analyzing the performance of your web application and identifying ways to improve it. Web applications are a mixture of server-side and client-side code. Your application can have performance problems on either side and both need to be optimized. The client side relates to performance as seen within the web browser.

Web Performance Optimization: Top 3 Performance Tips

Using the derived expressions, optimization problems are then formulated and solved to minimize the mean packet delay and to maximize the channel throughput per unit of area. These results indicate that the proposed analysis is capable of assessing the trade-off involved in radio-resource management when different classes of users are considered.
