The 1.5 amp value for current is the current at the battery location. For a series circuit with no branching locations, the current is everywhere the same. The current at the battery location is the same as the current at each resistor location. Subsequently, the 1.5 amp is the value of I_1 , I_2 , and I_3 . $I_{\text{battery}} = I_1 = I_2 = I_3 = 1.5 \text{ amp}$
