Pinterest uses computer vision – another application of neural networks, where we teach computers to “see” like a human, in order to automatically identify objects in images (or “pins”, as they call it) and then recommend visually similar pins.

Neural Networks: Applications in the Real World | upGrad blog

The Neural Network is first given a set of high-level input data which the system reads and analyzes. The system then detects the properties of the inputs, layer by layer. In case of an image, the first layer may detect the contrast and the next layer may detect the texture. In a similar way, different attributes are detected by different layers.
