A medical practitioner inserts the catheter via the internal jugular, subclavian or femoral veins using strict aseptic technique. Aubaniac (1952) first reported the use of central venous catheterisation and the catheters are now in common use in a variety of health care settings (Drewett, 2000) though they are more commonly used in the high-dependency category patient.

Central venous catheters are inserted into the right atrium of the heart through the central venous superior vena cava. Central venous catheters can be advanced into the superior vena cava through a peripheral vein, as is the case with a peripherally inserted central venous catheter, or PICC, and also into the central venous system through the subclavian or jugular vein.
