Implementation of LEACH (Low-energy adaptive clustering hierarchy) for WSN (Wireless Sensor Network)in MATLAB. Low-energy adaptive clustering hierarchy ("LEACH") is a TDMA-based MAC protocol which is integrated with clustering and a simple routing protocol in wireless sensor networks (WSNs). The goal of LEACH is to lower the energy consumption required to create and maintain clusters in order to improve the life time of a wireless sensor network.

LEACH assumes that each node has a radio powerful enough to directly reach the base station or the nearest cluster head, but that using this radio at full power all the time would waste energy. Nodes that have been cluster heads cannot become cluster heads again for P rounds, where P is the desired percentage of cluster heads.

This is LEACH (Low-Energy Adaptive Clustering Hierarchy) routing protocol for a WSN. It creates a 100-node network with a random position in an 100 square meter field. During Set Up phase it elects cluster heads based on LEACH's cluster head election probability "p" which is included in the "threshold" parameter.
