Securing Net Web Services With

Securing the Web service Adding Windows authentication to the Web service begins by accessing the necessary namespace. The System.Web.Security and System.Security.Principal namespaces are...

Easily secure custom Web services with .NET - TechRepublic

Implement authentication in.NET microservices and web applications It's often necessary for resources and APIs published by a service to be limited to certain trusted users or clients. The first step to making these sorts of API-level trust decisions is authentication. Authentication is the process of reliably verifying a user's identity.

Securing .NET Microservices and Web Applications ...

A request can be sent from the Web service client to Security Token Service. This service can be an intermediate web service which is specifically built to supply usernames/passwords or certificates to the actual SOAP web service. The security token is then passed to the Web service client.

Web Service(WS) Security Tutorial with SOAP Example

Create The Token Service What you need here is a service that can live with the application lifecycle and either get a new access token, or return one that it already has. To do this, create an ITokenService interface and an OktaTokenService implementation class inside a new folder at the root of your MVC app called "Services".

How to Secure Your .NET Web API with Token Authentication ...

I don't believe this is a problem that is suited for cryptography. It would be better to limit access to your web service using an IP restriction. If this data is being transferred over an insecure connection like the open internet, then you could use ssl to verify the client and server as well as keep the transmitted data safe. You could also use VPN which is probably the easiest to implement.

asp.net - Securing a Web Service - Stack Overflow

When signatures are used to secure a web service, all clients and the web service itself need a public-/private key pair. The generation of such key pairs is described in section Key generation . The web service needs to know the public key (resp. the certificate) of the client to verify the signature if he receives a request with signed elements.

Security Best Practices: Web Services - WS-Attacks

The secure Hello Web Service returns a string "Hello Authenticated user <name>" if the Username and password match, and throws a System.Web.Services.Protocols.SoapHeaderException otherwise. The Secure Web Service Fire up Visual Studio.NET and create an ASP.NET Web Service project. Name the project " SecureWS ".

WS-Security: Secure Web services through SOAP Message ...

Securing Web Services. Because of its nature (loosely coupled connections) and its use of open access (mainly HTTP), SOA implemented by Web services adds a new set of requirements to the security landscape. Web services security includes several aspects: Authentication —Verifying that the user is who she claims to be. A user's identity is verified based on the credentials presented by that user, such as:

Understanding Web Services Security Concepts

Regarding customer services, I can possibly get the winning slot for being the most IT illiterate person in Shropshire. I therefore need the assurance of a solid back office team. I have had to get help more than once from Secure Web Services & every time I've needed assistance it's been readily available to me

Securing .NET Web Services with SSL: How to Protect "Data ...

You use HTTPS to restrict access to web services and secure the data that clients submit. HTTPS helps secure communications between a client and a web service by encrypting communications

between the two. Encryption uses Transport Layer Security (TLS). TLS is sometimes still referred to as Secure Sockets Layer (SSL), which was the predecessor of TLS.

Secure web services using TLS - Azure Machine Learning ...

ASP.NET uses Windows authentication in conjunction with Microsoft Internet Information Services (IIS) authentication. Authentication is performed by IIS in one of three ways: basic, digest, or integrated Windows authentication. When IIS authentication is complete, ASP.NET uses the authenticated identity to authorize access.

ASP.NET security overview

There are two approaches to the securing of web services: securing the web service itself (in IIS), and authenticate the caller of the web service, or encrypting the content communicated in the web service call or request. The Silverlight .Net framework subset contains the System.Security.Cryptography namespace to enable you to do this.

Securing WebServices - social.msdn.microsoft.com

Scenario: you have a web & mobile front-end, both using a REST API as a back-end. You want to secure that back-end with authentication / authorization. How do you do that in Azure? There are obviously a bunch of ways to do that. In this post, I'll discuss the recommended approach: using Azure Active Directory. We'll build an Hello World solution in .NET implementing it.
