### Biology speciation questions and answers Flashcards | Quizlet

New species arise through a process called speciation. In speciation, an ancestral species splits into two or more descendant species that are genetically different from one another and can no longer interbreed. Darwin envisioned speciation as a branching event.

### Species & speciation (article) | Speciation | Khan Academy

answer choices Speciation can show us that new species don't choose to adapt, but have changed due to diverging from an original species due to reproductive barriers. Speciation can show us that new biological species can come from divergence (separating) due to reproductive barriers.

### Speciation | Biology - Quizizz

Selection and Speciation Mating results in viable, but infertile offspring. Oeanisms C & D NOT the same species. Organisms do not have compatible reproductive organs. Mating is not possible.

03121701 - kimberliejane.com

Speciation is the process through which new species form. A speciation event represents a branch point, where one genetic lineage splits into two. Barriers to reproduction, selection for different heritable traits, reduced ability to make hybrid offspring, and reduced allele mixing contribute to speciation.

#### **Speciation - University of Utah**

Artificial speciation is the form of speciation that can be achieved by the input of human influence. By separating populations, and thereby preventing breeding, or by intentionally breeding individuals with desired morphological or genotypic traits, humans can create new, distinct species.
