Special Relativity Questions & Problems (Answers) 1. If you were on a spaceship travelling at $0.50c$ away from a star, what speed would the starlight pass you? (The speed of light: 3.00×10^8 m/s) 2. Does time dilation mean that time actually passes more slowly in moving references frames or that it only seems to pass more slowly?

Problem Set 7 Solution Quick overview: Although relativity can be a little bewildering, this problem set uses just a few ideas over and over again, namely 1. Coordinates $(x;t)$ in one frame are related to coordinates $(x_0;t_0)$ in another frame by the Lorentz transformation formulas. 2.

Answer - Open Yale Courses

In Special Relativity problems, you relate the observations made by two observers in different reference frames measuring the same thing. Therefore, useful pictures are pictures of the motion being described with the two observers and the experiment (the thing that they are measuring) clearly indicated. The relative velocity of the two observers should also be shown.

Problem : Two protons approach each other from opposite direction, traveling with equal and opposite speeds $0.6c$. They collide to form a single particle that is at rest. What is the mass of this particle? (The proton mass is 1.67×10^{-27} kilograms). We used a similar setup in Section 1 to show that energy was conserved.

Time dilation, in the theory of special relativity, the “slowing down” of a clock as determined by an observer who is in relative motion with respect to that clock. In special relativity, an observer in inertial (i.e., nonaccelerating) motion has a well-defined means of determining which events occur simultaneously with a given event. A second inertial observer, who is in relative motion ...

Example Question #1 : Special Relativity A scientist measures the

spectrum of relativistic jet emitted from a black hole. He finds that the a particular spectral line, which has a stationary wavelength of 212.5 nm, has a Doppler shifted wavelength of 643.7 nm.

Special Relativity - GRE Subject Test: Physics

(relativity being too controversial then). Einstein wrote two theories of relativity; the 1905 work is known as “special relativity” because it deals only with the special case of uniform (i.e. non-accelerating) motion. In 1915 he published his “general theory of relativity”, dealing with gravity and acceleration. Strange things happen in an accelerated frame.

Chapter 6 deals with the special theory of Relativity. Problems are solved under

Lorentz transformations of length, time, velocity, momentum and energy, the invariance of four-momentum vector, transformation of angles and Doppler effect and threshold of particle production. Chapters 7 and 8 are concerned with problems in low energy Nuclear physics.
