What Does The Honeybee See

Bees detect motion but have no perception of what it is that moves, and certainly they do not recognize “things” by their shapes. Yet they clearly see well enough to fly and find food with a minute brain. Bee vision is therefore relevant to the construction of simple artificial visual systems, for example for mobile robots.

What does the Honeybee See? And how do we Know?

Honey bees make honey from pollen and

nectar collected from flowers. They live in large colonies with one queen, many sterile females workers and some male drones. In the wild honey bees nest in hollow trees. When a new queen emerges, she embarks on a mating flight. On returning to her hive, with help from the workers, she kills the failing ...

Like most other insects, the honey bee (*Apis mellifera*) has compound eyes - hundreds of single eyes (called ommatidia) arranged next to each other, each with its own lens and each looking in a different direction. This does not mean, however, that the bee sees lots of little pictures, as each ommatidium sees only one intensity, contributing a 'pixel' to the overall image perceived by the compound eye, just like a single photoreceptor in the retina of our own eye.
