Chapter 48

Populations rarely, if ever, live in isolation from populations of other species. In most cases, numerous species share a habitat. The interactions between these populations play a major role in regulating population growth and abundance.

45: Population and Community Ecology - Biology LibreTexts

Species in a community can interact in three ways – predation, mutualism, competition. Major communities are self-regulating and self-sustaining while minor communities depend upon other communities and form the building blocks for major communities. Let us see some important difference between

species, population and community.
Species

Discover the Difference Between Species, Population ...

A population might also be described in terms of communities whose membership overlaps or through which messages diffuse. An exciting body of research, including studies of diffusion which we discuss below, has constructed large platform-spanning populations of communities. In the rest of this chapter, we use examples from recent empirical research

Studying Populations of Online Communities
Populations are groups

of individuals of the same species that inhabit a shared environment. Communities include multiple co-existing, interacting populations of different species. Metapopulations span multiple populations of the same species that occupy different areas.
