The probability of an event occurring given that another event has already occurred is called a conditional probability. Recall that when two events, A and B, are dependent, the probability of both occurring is: $P(A \text{ and } B) = P(A) \times P(B \text{ given } A)$ or $P(A \text{ and } B) = P(A) \times P(B | A)$ If we divide both sides of the
