This paper considers the problem of decomposing an image defined on a manifold into a structural component and a textural component. We formulate such decomposition as a variational problem, in which the total variation energy is used for extracting the structural part and based on the properties of texture one of three norms, L^2 , L^1 and G , is used in the fidelity term for the textural part.

A unified framework for studying extremal curves on real Stiefel manifolds is presented. We start with a smooth one-parameter family of pseudo-Riemannian metrics on a product of orthogonal groups acting transitively on

Stiefel manifolds. In the next step Euler-Lagrange equations for a whole class of extremal curves on Stiefel manifolds are derived.
