Titration Of Acids And Bases

An acid-base titration is a quantitative analysis of acids and bases; through this process, an acid or base of known concentration neutralizes an acid or base of unknown concentration. The titration progress can be monitored by visual indicators, pH electrodes, or both. The reaction's equivalence point is the point at which the titrant has exactly neutralized the acid or base in the unknown analyte; if you know the volume and concentration of the titrant at the equivalence point, you can ...

Acid-Base Titrations | Introduction to Chemistry

Titration is a technique used in analytical chemistry to determine the concentration of an unknown acid or base. Titration involves the slow addition of one solution where the concentration is known to a known volume of another solution where the concentration is unknown until the reaction reaches the desired level.

Titration Curves of Acids and Bases - ThoughtCo

An acid-base titration is a method of quantitative analysis for determining the concentration of an acid or base by exactly neutralizing it with a standard solution of base or acid having known concentration. A pH indicator is used to monitor the progress of the acid-base reaction. If the acid dissociation constant of the acid or base dissociation constant of base in the analyte solution is known, its solution concentration can be

determined. Alternately, the pKa can be determined if the ...

SOLUTION. Because it is a strong acid-base reaction, the reaction will be: $\text{H}^+ + \text{OH}^- \rightarrow \text{H}_2\text{O}$ The original number of moles of H^+ in the solution is: $50.00 \times 10^{-3} \text{ L} \times 0.1 \text{ M HCl} = .005 \text{ moles}$. The number of moles of OH^- added is: $48.00 \times 10^{-3} \text{ L} \times 0.100 \text{ M OH}^- = 0.0048 \text{ moles}$. Which results in:
