ECE: Advanced Information and Network Security Homework 2 Fall 2012 1. The ciphertext 75 was obtained using RSA with $n = 437$ and $e = 3$. You know that the plaintext is either 8 or 9. Determine which it is without factoring n . Solution: The two possible plaintexts are 8 and 9. Encrypt each to get $83(\text{mod}437) = 75$ and $93(\text{mod}437) = 292$. Hence, the correct plaintext is 8.

While you may not need one for your private network, a business network is often more interesting for an attacker than a private network, because of the information that businesses have. It is also common for small businesses to not have a strong network security, making it even easier for attackers to get in to see customer data and business financials.
