Make sure that the generator's polarity is correct by connecting a voltmeter between the
generator's armature and ground. At 1200 RPM, the generator output voltage should be positive
(greater than +1.5V). A negative voltage reading indicates a generator that has a reverse polarity.
Do not connect the GCU to generator with reversed polarity.

Alternators don't have permanent magnets so when the aircraft battery is completely discharged,
the alternator will not charge. Does a generator ever lose its residual magnetism? Sort of.
Occasionally a generator will need polarizing, especially after inactivity. Flashing the field restores
function. Service manuals detail this procedure.

Many gas turbine aircraft are equipped with starter generator systems. Starter generator starting
systems are also similar to direct cranking electrical systems except that after functioning as a
starter, they contain a second series of windings that allow it to switch to a generator after the
engine has reached a self-sustaining speed.

The Hucks starter (invented by Bentfield Hucks during WWI) is a mechanical replacement for the ground crew. Based on a vehicle chassis the device uses a clutch driven shaft to turn the propeller, disengaging as the engine starts. A Hucks starter is used regularly at the Shuttleworth Collection for starting period aircraft.. Pull cord
