A simple design of a dipole antenna is to make the length of the antenna $\lambda/2$, where wavelength λ is equal to the speed of light over the center frequency the antenna is mean to operate at. At the feed of a center fed dipole, the current is at its peak and lowest at the ends of conductors, or wings.

HFSS are used in our project for the simulation and design calculation of microstrip patch antennas. The return loss, radiation pattern and 3D gain are evaluated in our project. Advantages: low weight, low cost, low profile and conformal. They can be easily fabricable and can integrate with other microstrip elements in monolithic applications.
