What is ASTM A967 - Specification for Chemical Passivation ...

ASTM A967. This is the standard used by general industries to describe and control the passivation of stainless steel. Passivation is a process of making stainless steel more stainless than it would be if left alone. It is based on using an acid (nitric or citric) under highly controlled conditions to remove free iron particles from the surface and to help form a metal oxide layer that increases its ability to resist rusting.

Passivation of Stainless Steel - ASTM A967, AMS 2700 & QQ-P-35 Passivation of stainless steel is a process that removes free iron from the surface of a stainless component and at the same time promotes the formation of a thin, dense oxide protective barrier.

Passivation of Stainless Steel | ASTM A967, QQ-P-35, AMS ...

ASTM A 967 uses the same definition as did the old Federal Specification, QQ-P-35.html, which allowed one to consider all production of similar material done in 24 hours to be a single lot. AMS 2700 considers different parts, or the same part made at different times, to be different lots (with the exception for parts with the legacy QQ-P-35 called out, when you can use the older definition.)

ASTM A967 vs. AMS 2700? Which is the right passivation spec?

The passivation specification for nitric in ASTM A-967 is IDENTICAL to the now defunct QQ-P spec. In addition it allows the improved passivation using citric formulations. There is no longer the need to passivate using the hazardous nitric systems, although passivation with nitric acid is certainly acceptable.
