ABSTRACT: In this lab double-replacement reactions were utilized to observe forming precipitates and to balance equations of newly formed solutions. Precipitates were found by combining a solution containing cations and anions to another solution of cations and anions. The double-replacement reactions were calculated using basic mathematic knowledge about balancing equations.

Lab: Single and Double Replacement Reactions

During the lab, each participant was given drop bottles, spot plates. The drop bottles contained different compounds which were dropped into the spot plates and mixed together. Compounds were combined together and would generally form a completely different looking substance. Droplets of reactants such as BaCl_2 and Na_2SO_4 were dropped

into spot plates, which created a double replacement reaction.

Double Displacement Reactions: Forming Precipitate Lab ...

Double replacement reactions —also called double displacement, exchange, or metathesis reactions —occur when parts of two ionic compounds are exchanged, making two new compounds. The overall pattern of a double replacement reaction looks like this:

$$A + B - + C + D - \rightarrow A + D - + C + B -.$$

21. Double Replacement Reactions

A double replacement reaction is a chemical reaction where two reactant ionic compounds exchange ions to form two new product compounds with the same ions.

Key Takeaways:
Double Replacement Reaction A double replacement reaction is a type of chemical reaction that occurs when two reactants exchange cations or anions to yield two new products.

Here is the double-replacement reaction again, but with the follow-up decomposition

reaction. $\text{HCl (aq)} + \text{NaHCO}_3\text{(aq)} \rightarrow \text{H}_2\text{CO}_3\text{(l)} + \text{NaCl (aq)} \downarrow \text{H}_2\text{CO}_3 \rightarrow \text{CO}_2\text{(g)} + \text{H}_2\text{O (l)}$ Since H_2CO_3 decomposes into CO_2 and H_2O , you can see bubbles forming. That's a sign that the double-replacement reaction is occurring.

A double displacement reaction is also called a double replacement reaction, salt metathesis reaction, or double decomposition. The reaction occurs most often between

ionic compounds, although technically the bonds formed between the chemical species may be either ionic or covalent in nature.
