The starting point of the quantum mechanical formalism is the Hilbert space. The Hilbert space is a mathematical concept; it is a space in the sense that it is a complex vector space which is endowed with an inner or scalar product $\langle \cdot, \cdot \rangle$, $\langle \cdot, \cdot \rangle$ $\langle \cdot, \cdot \rangle$. As we show in the next section, this interpretation allows us to approximate the covariance operator using Hilbert space methods which are typically used for approximating differential and pseudo-differential operators in the context of partial differential equations (Showalter 2010). When the covariance function is homogenous, the corresponding operator will be translation invariant thus allowing for Fourier representation as a transfer function.
