Physical metallurgy. Physical metallurgy is the science of making useful products out of metals. Metal parts can be made in a variety of ways, depending on the shape, properties, and cost desired in the finished product. The desired properties may be electrical, mechanical, magnetic, or chemical in nature; all of them can be enhanced by alloying and heat treatment.

For steel tubing, ASTM specification A513 cites the Rockwell B test (abbreviated HRB or RB). The Rockwell B test measures the difference in penetration into the steel by a 1/16-in.-diameter steel ball between a minor applied preload and a major load of 100 kilograms of force. A typical result is HRB 60 for standard, low-carbon steel.

Understanding steel tube and pipe metallurgy

Physical metallurgy is one of the two main branches of the scientific approach to metallurgy, which considers in a systematic way the physical properties of metals and alloys. It is basically the fundamentals and applications of the theory of phase transformations in metal and alloys, as the title of classic, challenging monograph on the subject with this title [1].
