In probability theory and statistics, complex random variables are a generalization of real-valued random variables to complex numbers, i.e. the possible values a complex random variable may take are complex numbers.

Complex random variables can always be considered as pairs of real random variables: their real and imaginary parts. Therefore, the distribution of one complex random variable may be interpreted as the joint distribution of two real random variables. Some concepts of real random var

In the calculus of functions of a complex variable there are three fundamental tools, the same fundamental tools as for real variables. Differentiation, Integration, and Power Series. I'll first introduce all three in the context of complex variables, then show the relations between them.

1.1 Algebra of Complex numbers A complex number $z = x + iy$ is composed of a real part $\text{Re}(z) = x$ and an imaginary part $\text{Im}(z) = y$, both of which are real numbers, $x, y \in \mathbb{R}$. Complex numbers can be denoted as pairs of real numbers $(x; y)$ with special manipulation rules. That's how complex numbers are denoted in Fortran or C.

COMPLEX CONJUGATES The complex conjugate, or simply the conjugate, of a complex number $z = x + iy$ is defined as the complex number $x - iy$ and is denoted by $\bar{z}$; that is, $\bar{z} = x - iy$. (1) The number z is represented by the point $(x, -y)$, which is the reflection in the real axis of the point (x, y) representing z (Fig. 5).

Complex analysis is a basic tool with a great many practical applications to the solution of physical problems. It revolves around complex analytic functions—functions that have a complex derivative. Unlike calculus using real variables, the mere existence of a complex derivative has strong

implications for the properties of the function.

The common formulas for differentiation are exactly the same for complex variables as they are for real variables, and their proofs are exactly the same. For example, the product formula: $f(z + z)g(z) = f(z)g(z) + f'(z)g(z) + f(z)g'(z)$. As $z \rightarrow 0$, this becomes the familiar $f_0g_0 + f_0'g_0 + f_0g_0'$. That the numbers are complex made no difference.
