Mastoid Cavity Obliteration with Combined Palva ... - CORE

If temporal bone pneumatization is limited, it is quite common to achieve a small self-cleaning cavity without the need for mastoid obliteration. However, combined mastoid and epitympanic obliteration in these cases may still be deemed advantageous as a means of repositioning the height of the tympanic membrane at the level of the native tympanic ring, thereby preserving normal middle ear volume and facilitating a successful ossiculoplasty.

Mastoid Cavity Obliteration | Ento Key

We present a method of combined BAHA and mastoid obliteration utilising the soft tissue from the BAHA soft tissue reduction to obliterate the cavity. This technique was used for good effect in six cases, for patients with a unilateral discharging mastoid cavity not amenable to medical treatment along with a conductive hearing loss.

Single-Stage BAHA and Mastoid Obliteration

Our direct comparative data suggest that canal wall down mastoidectomy with obliteration is superior to a canal wall up technique in primary cholesteatoma surgery, providing a lower recidivism rate combined with a low post-operative ear discharge rate.
