Project Wild Bird Beak Adaptations Activity

When they have to, birds use beaks and feet as weapons to defend themselves, their nests, and their chicks. Birds use beaks for drinking, feeding their young, and preening. Some birds, like the American White Pelican, even grow special structures on their beaks during breeding season to make themselves more attractive (at least, to each other).

Project Wild Bird Beak Adaptations Activity

Having long, narrow, pointed wings allows a bird to have plenty of thrust while reducing drag. This makes flying easier and reduces the amount of energy needed to fly long distances. A good example of this wing type can be seen on many gull species, including the Franklin's Gull, which migrates from its wintering grounds in South America to its summer breeding grounds in Canada.
