...

single pipe - feed and return - micro bore. A water central heating system consists of basically the boiler, the radiators and the interconnecting piping. The boiler heats the water and (normally) a pump circulates the water through the pipework and radiators and back to the boiler. There are a number of different arrangements of boiler, pipework and supply to the radiators;

each systems has its own advantages and drawbacks.

Basic water central heating - radiator pipework

The radiator circuits in most modern wet central heating systems are made from standard 15mm copper pipe, while the pipes that link the boiler, pump and points where the circuits split off will be 22mm or 28mm in diameter. Soldered capillary joints are best (apart from connections to the boiler, pump and valves), as these are least likely to leak.
