Introduction This technique is generally used to separate gases in a gaseous solution. The more common technique is gas-liquid chromatography in which the stationary

phase is a porous solid covered with an absorbing liquid. Gas-liquid chromatography or GLC is used to separate a wide variety of organic compounds.

Introduction: Gas chromatography (GC) is an analytical method used for separating and analyzing compounds that can be vaporized into a gaseous state. This method is used to analyze compounds and samples that have low molecular weight and high volatility.

Title: Gas Chromatography
Gas chromatography separates molecules

based on their boiling points and their interaction with the stationary phase. Mixtures to be separated are heated past the boiling of their least volatile component. They are then swept across the solid phase by an inert gas, hence the name gas chromatography.
