Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (vf), and initial velocity (vi). If values of three variables are known, then the others can be calculated using the equations. This page demonstrates the process with 20 sample problems and accompanying ...

There are three key kinematic equations. If you carefully select the equation which most directly describes the situation in your problem, you will not only solve the problem in fewer steps but also understand it better. The three equations, written for motion in the y-direction, are: 1. $y = y_0 + v_{0y} \Delta t + \frac{1}{2} a_y (\Delta t)^2$ (relates position and time) 2. $v_y = v_{0y} + a_y \Delta t$ (relates velocity and time)
