Dynamic Behavior Analysis Of Crystal

The alignment behavior of a crystal with a magnetic anisotropy of $\chi_c < \chi_a$ under the imposition of a rotating magnetic field has been investigated by numerical calculation. The promotion of the crystal alignment when the projection of the magnetically hard axis on the magnetic field rotating plane is parallel to the magnetic field direction and its suppression when the magnetically hard axis is perpendicular to the magnetic field direction can be explained by the fact that the direction ...

The dynamic behavior of a nematic liquid crystal with added carbon nanotubes (CNTs) in an electric field was analyzed. A theoretical model based on elastic continuum theory was developed and the relaxation times of nematic liquid crystals with CNTs were evaluated.

The dynamic behavior of a mixture consisting of liquid crystalline 4-cyano-4'-pentylbiphenyl (5CB) and CdSe/ZnS quantum dots in electric fields was theoretically studied. The model was based on elastic continuum theory considering the interaction of the nematic molecules with the surrounding molecules, with the quantum dots and with the electric field.

The existence of dynamic recrystallization (DRX), i.e., recrystallization occurring during straining, was initially questioned, until the publication of strong mechanical as well as microstructural evidences. In a second step, it was considered by some authors as a mere "laboratory curiosity" rather than an "industrial tool".

Viscoelasticity is the property of a material that exhibits some combination of both elastic or spring-like and viscous or flow-like behavior. Dynamic mechanical analysis is carried out by applying a sinusoidally varying force to a test specimen and measuring the resulting strain response. By analyzing the material response over one cycle, its elastic-spring-like storage modulus and its viscous or flow-like loss (imaginary) modulus can be determined.

The dynamic behaviour occurs when the conveyor is running, starting or stopping. Running dynamic behaviour, including belt flap and structural resonance, will not be discussed in detail. Belt flap occurs when the roll or belt passing frequency is in sync with the belt stringflap frequency. Normally, the consequences are not significant.

challenging problems of behavior analysis and dynamic scene understanding. Activity patterns learning usually requires the following two steps: preprocessing of raw trajectories and clustering. In particular, the former aims at producing a trajectory represen-tation which is suitable for the chosen clustering algorithm.

The aim of this work is, therefore, to develop a quantitative fractographic methodology to understand the fracture behavior of single-crystal silicon wafers. This is achieved by leveraging 3D surface profilometries of fractured specimens to provide a "surface angle mapping" with respect to the main orientation of the crystal. An analytical solution describing the unstable motion of an anisotropic circular crack is developed to help resolve the issue of determining which family of planes ...

Structural dynamics is a type of structural analysis which covers the behavior of a structure subjected to dynamic loading. Dynamic loads include people, wind, waves, traffic, earthquakes, and blasts. Any structure can be subjected to dynamic loading. Dynamic analysis can be used to find dynamic displacements, time history, and modal analysis. Structural analysis is mainly concerned with finding out the behavior of a physical structure when subjected to force. This action can be in the form of l
