Because the CyberKnife is the only system with robotic-based image-guided delivery, the best approach for developing a QA program is to study existing American Association of Physicists in Medicine (AAPM) Task Group (TG) reports (e.g., TG-51, TG-42, TG-53, and TG-76), determine the recommendations that are applicable to the CyberKnife, and then adapt those recommendations and procedures to the CyberKnife system. The difficulty with this approach is that it is very time-intensive

As these systems become a routine clinical modality, we propose a daily quality assurance (QA) program for cone-beam computed tomography (CBCT) integrated with a linear accelerator. The image-guided system used in this work combines a linear accelerator with conventional X-ray tube and an amorphous silicon flat-panel detector mounted orthogonally from the accelerator central beam axis.
