Clustering

Cluster analysis or clustering is the task of grouping a set of objects in such a way that objects in the same group (called a cluster) are more similar (in some sense) to each other than to those in other groups (clusters). It is a main task of exploratory data mining, and a common technique for statistical data analysis, used in many fields, including pattern recognition, image

analysis ...

Cluster analysis - Wikipedia

Grouping unlabeled examples is called clustering. As the examples are unlabeled, clustering relies on unsupervised machine learning. If the examples are labeled, then clustering becomes...

What is Clustering? | Clustering in Machine Learning

Clustering is the task of dividing the population or data points into a number of groups such that data points in the same groups are more similar to other data points in the same group than those in other groups. In simple words, the aim is to segregate groups with similar traits and assign them into

clusters.

to use cluster in a sentence.

Cluster | Definition of Cluster by Merriam-Webster

Clustering is the task of dividing the population or data points into a number of groups such that data points in the same groups are more similar to other data points in the same group and dissimilar to the data points in other groups. It is basically a collection of objects on the basis of similarity and dissimilarity between them.

Clustering in Machine Learning - GeeksforGeeks

Database clustering refers to the ability of several servers or instances to connect to a single database. An instance is the collection of memory

and processes that interacts with a database, which is the set of physical files that actually store data. Techopedia explains Database Clustering

What is Database Clustering? - Definition from Techopedia

Clustering can be used to segment customers into a small number of groups for additional analysis and marketing activities. Clustering for Utility Cluster analysis provides an abstraction from individual data objects to the clusters in which those data objects reside.

Cluster Analysis: Basic Concepts and Algorithms

K-Means Clustering in R `kmeans(x, centers,`

`iter.max=10)` x A numeric matrix of data, or an object that can be coerced to such a matrix (such as a numeric vector or a data frame with all numeric columns).
centers Either the number of clusters or a set of initial cluster centers.

What is Cluster Analysis?

Clustering is a VMD plugin to calculate and visualize clusters of conformations for a trajectory. Each conformation is color coded according to the cluster to which it belongs. This is done by creating one representation for each cluster, and setting variable Draw Multiple frames to the corresponding frame numbers.
