Protein Protein Interactions A Molecular

Protein-protein interactions (PPIs) are physical contacts of high specificity established between two or more protein molecules as a result of biochemical events steered by interactions that include electrostatic forces, hydrogen bonding and the hydrophobic effect. Many are physical contacts with molecular associations between chains that occur in a cell or in a living organism in a specific biomolecular context.

Proteins involved in the same process should cluster together in network maps They can help us to characterise protein complexes and pathways; interaction networks can be used as a draft ‘map’ to add detail to biological processes and pathways and can help discover new pathways, complexes and functional modules within the cell

The importance of molecular interactions | Protein ...

Identification of protein-protein interactions (PPIs) is at the center of molecular biology considering the unquestionable role of proteins in cells. Combinatorial interactions result in a repertoire of multiple functions; hence, knowledge of PPI and binding regions naturally serve to functional proteomics and drug discovery.

Predicting Protein-Protein Interactions from the Molecular ...

In addition, characterization of protein-protein interactions informs us of the molecular basis of human disease and provides opportunities to intervene to prevent, detect, and treat disease.

Protein-Protein Interactions: A Molecular Cloning Manual ...

Proteins do not act in isolation, and more than 80% of all proteins in the cell interact with other molecules to get functional Protein interactions tell us how proteins come together to construct metabolic and signaling pathways in order to fulfill their functions.

Predicting Protein-Protein Interactions from the Molecular ...

Interactions between protein molecules are essential for the assembly, function, and regulation of proteins. The contact region between two protein molecules in a protein complex is usually complementary in shape for both molecules and the area of the contact region can be used [...]

It has been estimated that ca. 130,000 protein-protein interactions exist within the human cell, representing vast opportunity for therapeutic intervention if effective strategies could be devised for modulating this interactome. 4 Significant attention has focused on inhibiting protein-protein interactions, with recent success being demonstrated with marketed agents, such as navitoclax and lifitegrast, and several investigational drugs in clinical trials. 5 Approaches to stabilize protein ...

Inducing protein-protein interactions with molecular glues ...

The term specifically refers to physical interactions among molecules (such as those among proteins, also known as protein-protein interactions, PPIs; or between small molecules and proteins) but can also describe sets of indirect interactions among genes (genetic interactions).

Interactome - Wikipedia

A high-level representation of protein structure, the molecular surface, displays patterns of chemical and geometric features that fingerprint a protein's modes of interactions with other biomolecules. We hypothesize that proteins participating in similar interactions may share common fingerprints, independent of their evolutionary history.

Deciphering interaction fingerprints from protein ...

It appears that a general mode of protein-protein interaction is mediated by a diverse group of specialized protein modules within individual proteins (2). These protein modules often contain sequence motifs and structures conserved throughout evolution.
