### **The First Law of Thermodynamics -**

**UCD**

The first law of thermodynamics is an expression of the conservation of energy principle. Energy can cross the boundaries of a closed system in the form of heat or work. Energy transfer across a system boundary due solely to the temperature difference between a system and its surroundings is called heat.

**Chapter 4 The First Law of Thermodynamics**

Heat ( $q$ ) and work ( $w$ ) Energy passes between the system and its surroundings in two ways, as heat ( $q$ ) or work ( $w$ ).  $E = q + w$ . Heat,  $q$ . Heat is the flow of energy along a temperature gradient. If the system and surroundings are at different temperatures, energy

will flow.

### **Unit 4: Thermodynamics**

First Law of Thermodynamics. Energy is  
the ability to do work or transfer heat.  
Work is the transfer of energy from one  
body to another. In a sense, work is  
energy in the process of transfer. This  
association between work and energy  
allows us to define a unit of energy as  
that quantity transferred when a unit of  
work is done.

A way of expressing the first law of thermodynamics is that any change in the internal energy ( $\Delta E$ ) of a system is given by the sum of the heat ( $q$ ) that flows across its boundaries and the work ( $w$ ) done on the system by the surroundings:  $\Delta E = q + w$   $\Delta E = q + w$
