Ageing Gender And Illness In

Gender can be understood as the complex and differing pattern of roles, responsibilities, norms, values, freedoms, and limitations that defines what is thought of as "masculine" and "feminine" throughout the life course and which all play a role as determinants of ageing. For example, social and health factors such as poor education, less access to good nutrition, to health and social services, to property and to the labour market, generally disadvantage women in comparison with men ...

Depression and osteoporosis are the commonest problems in elderly subjects. Some problems specific to males are hypogonadism, erectile dysfunction and enlargement of prostate and to females are post-menopausal disturbances, urinary incontinence and breast and lung cancer. However, problems of special concern in both male and female elderly are malnutrition, falls and cognitive dysfunction.

Gender, aging, health and society

This essay will look at the gender inequalities in health and illness statically. This essay will also look at how women live longer than men and what diseases and mental health symptoms affect both men and women in mortality and morbidity rates such as cancers and depression. Statistics will show how people are living longer and how this will continue as more people will become centenarians as the years go by.

Gender Inequalities in Health and Illness

Age related illnesses Heart attacks, cancer and strokes are the three main causes of death in the developed world. As we age our chances of developing dementia, Parkinson's disease and other illnesses such as osteoarthritis can also increase.
