Free energy constitutes the most important thermodynamic quantity to understand how chemical species recognize each other, associate or react. Examples of problems in which knowledge of the underlying free energy behaviour is required, include conformational equilibria and molecular association, partitioning between immiscible liquids, receptor-drug interaction, protein-protein and protein-DNA association, and protein stability.

This chapter focuses on metadynamics, which was first introduced in 2002 and then improved with several variants in the past decade. It provides an introduction to the basic concepts of molecular dynamics and of free-energy calculations. When appropriate collective variables (CVs) are used, the free-energy landscape provides a quantitative picture of the transition in terms of reactants and products stability and transition rates.

The FEP method was introduced by Robert W. Zwanzig in 1954.

According to the free-energy perturbation method, the free energy difference for going from state A to state B is obtained from the following equation, known as the Zwanzig equation : $\Delta F (A \rightarrow B) = F_B - F_A = -k_B T \ln \exp \left(-\frac{E_B - E_A}{k_B T} \right)$.

Free energy perturbation - Wikipedia

Accurate predictions of changes to protein-ligand binding affinity in response to chemical modifications are of utility in small-molecule lead optimization. Relative free-energy perturbation (FEP) approaches are one of the most widely utilized for this goal but involve significant computational cost, thus limiting their application to small sets of compounds. Lambda dynamics, also rigorously ...

Free-energy calculations in the framework of classical molecular dynamics simulations are nowadays used in a wide range of research areas including solvation thermodynamics, molecular recognition, and protein folding. The basic components of a free-energy calculation, that is, a suitable model Hamiltonian, a sampling protocol, and an estimator for the free energy, are independent of the specific application.
