The area of the brain responsible for visual perception is the occipital lobe (primary visual cortex V1 and secondary visual cortex V2). Hearing: Ability to receive and interpret information that arrives to our ears by audible frequency waves through the air or another mean (sound). The brain part in charge of the

basic stage of auditory perception is the temporal lobe (primary auditory cortex A1 and secondary auditory cortex A2).

Perception- Cognitive ability CogniFit

The sensory perception of pain would come from mechanical, temperature, electrical or chemical stimuli. The senses of both smell and taste use the chemical stimuli. The senses tend to be weaker along with the age. There are five different stimulus types involved in sensory processing, i.e. chemical, mechanical, temperature, electrical, and light.

Sensory Perception | Process of Sensory Perception

Perception is the central processing of

sensory stimuli into a meaningful pattern. Perception is dependent on sensation, but not all sensations are perceived. Receptors are the cells or structures that detect sensations. A receptor cell is changed directly by a stimulus.
