An equation called the Hardy Weinberg

equation for the allele frequencies of a population is $p^2 + 2pq + q^2 = 1$. p represents the A allele frequency. The letter q represents the a allele. Hardy and Weinberg also gave five conditions that would ensure the allele frequencies of a population would remain constant.

Lab 8 Population Genetics. Introduction: G. H. Harding and W. Weinberg both came up with the idea that evolution could be viewed as changes in the frequency of alleles in a population. They used the letter “ p ” to represent and “A” allele and the letter “ q ” to represent the “a” allele. So, in a population of 100 individuals and 40% of the alleles are “A”, then “ p ” is .40, “ q ” would equal .60.
