Population Genetics and Evolution

Lab 8 Population Genetics. Introduction: G. H. Harding and W. Weinberg both came up with the idea that evolution could be viewed as changes in the frequency of alleles in a population. They used the letter " p " to represent and " A " allele and the letter " q " to represent the " a " allele. So, in a population of 100 individuals and 40% of the alleles are " A ", then " p " is .40, " q "

would equal .60.

Lab 8 Population Genetics. Introduction. G.H Hardy and W. Weinberg developed a theory that evolution could be described as a change of the frequency of alleles in an entire population. In a diploid organism that has gene a gene loci that each contain one of two alleles for a single trait t the frequency of allele A is represented by the letter p. The letter q represents the frequency of the a allele.
