Note that this result is the same as for the strong acid-strong base titration example provided, since the amount of the strong base added moves the solution past the equivalence point.

14.7 Acid-Base Titrations - Chemistry

An acid-base titration is a quantitative analysis of acids and bases; through this process, an acid or base of known concentration neutralizes an acid or base of unknown concentration. The titration progress can be monitored by visual

indicators, pH electrodes, or both. The reaction's equivalence point is the point at which the titrant has exactly neutralized the acid or base in the unknown analyte; if you know the volume and concentration of the titrant at the equivalence point, you can ...

Titration Acid-Base (Simple) - Practical Chemistry

A titration is a process used to determine the volume of a solution needed to react with a given amount of another substance. When titrating a solution of the strong acid hydrochloric acid, HCl, with a solution of the strong base sodium hydroxide, NaOH, the hydrogen ions from the HCl react with hydroxide ions from the NaOH in a one-to-one ratio to produce

water in the overall reaction:
