Spinal Cord Stimulation Implantation Percutaneous

Percutaneous leads positioning in the epidural space. The posterior epidural space, dorsal to the dura, is the target of lead placement for spinal cord stimulation. This space is primarily occupied by fat tissue and small blood vessels, lymphatics and nerve roots laterally.

Spinal Cord Stimulation: Implantation Techniques ...

Spinal cord stimulators (SCS) are implantable medical devices used to treat chronic pain of neurologic origin, such as sciatica, intractable back pain, and diabetic. The device generates an electric pulse near the spinal cord's dorsal surface, providing a parasthesia sensation that alters the perception of pain by the patient, and is typically used in conjunction with conventional medical management.
