Microbiology

A Laboratory Experience

As a group of organisms that are too small to see and best known for being agents

of disease and death, microbes are not always appreciated for the numerous supportive and positive contributions they make to the living world. Designed to support a course in microbiology, Microbiology: A Laboratory Experience permits a glimpse into both the good and the bad in the microscopic world. The laboratory experiences are designed to engage and support student interest in microbiology as a topic, field of study, and career. This text provides a series of laboratory exercises compatible with a one-semester undergraduate microbiology or bacteriology course with a three- or four-hour lab period that meets once or twice a

week. The design of the lab manual conforms to the American Society for Microbiology curriculum guidelines and takes a ground-up approach -- beginning with an introduction to biosafety and containment practices and how to work with biological hazards. From there the course moves to basic but essential microscopy skills, aseptic technique and culture methods, and builds to include more advanced lab techniques. The exercises incorporate a semester-long investigative laboratory project designed to promote the sense of discovery and encourage student engagement. The curriculum is rigorous but manageable for a single semester and

incorporates best practices in biology education.

Laboratory Applications in Microbiology: A Case Study Approach

handful of reagents, you will learn to isolate, grow, and identify bacteria that live all around us. This is no ordinary microbiology laboratory course; not only will you learn how to streak plates, use a microscope, perform a Gram stain, and prepare serial dilutions and spread plates—fundamental skills found in every microbiologist's toolkit—you will solve a series of public health-related challenges that many professional microbiologists encounter in their work. By the end of this course, you will:

- Determine the origin of a nosocomial infection.
- Using foundational and molecular methods, you will determine whether the infections occurring in hospitalized patients are the result of contaminated medical items.
- Select the antibiotic to treat a patient with Crohn's disease.
- You will find minimum inhibitory concentrations of various antibiotics for a *Pseudomonas* strain associated with Crohn's disease.
- Pinpoint the source of lettuce contaminated with *E. coli*.
- Using molecular tools you will investigate a common food safety challenge, antibiotic-resistant *E. coli* and the potential for spread of this resistance in the environment.
- Find the farm releasing pathogens into a stream used for drinking water.
- Using bacteriophage load in water samples, you will locate the source of

fecal contamination in the water supply of a village in an underdeveloped country. Evaluate the potential of bacteria to cause a urinary tract infection. You will test for biofilms, quorum sensing behavior, and chemotaxis and assess which disinfectants would be most effective for sanitizing contaminated surfaces. Microbiology educators and researchers Richard Meyer and Stacie Brown have created this hands-on, engaging introduction to the essential laboratory skills in the microbial sciences that is sure to change the way you view the world around you.
