Neuroprotective Therapy for Stroke and Ischemic Disease ...

Neuroprotective agents are medications that are being studied for use in some stroke patients, to minimize damage and prevent further injury to partially damaged nerve cells (neurons). The target of neuroprotective agents is to improve functional recovery in ischemic stroke patients by reducing the damage of the stroke.

What Are the Uses of Neuroprotective Agents in Stroke?

Currently, stroke can be successfully treated through the administration of a thrombolytic, but the therapeutic window is short and many patients are not able to receive treatment. Only about 30% of patients are "cured" by available treatments.
