GIS to Meet Renewable Energy Goals Throughout the developed world, there is ongoing interest in renewable energy as a replacement for traditional fossil fuel. Wind farms are cropping up around the world, and the sunniest spots are slated for solar power potential, while additional significant strides are being made to expand geothermal, tidal, biomass, and other types of

generation.

Renewable energy is energy that is generated from natural processes that are continuously replenished. This includes sunlight, geothermal heat, wind, tides, water, and various forms of biomass. This energy cannot be exhausted and is constantly renewed. Alternative energy is a term used for an energy source that is an alternative to using fossil fuels. Generally, it indicates energies that are non-traditional and have low environmental impact.
