Concepts of Biology

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Explore Life *Taylor & Francis*

Using a variety of exercise formats (traditional, guided inquiry, and design-your-own), this manual, written by Doreen Schroeder, helps students ask good questions and think critically. Students will analyze data, draw conclusions, and present those conclusions. They will also be challenged to make connections between lab exercises, between lecture and lab, and between biology in the laboratory (or lecture hall) and their own life. Each exercise in the student manual contains an overview, an introduction, a materials list, the methods, and application questions. Where appropriate, time has been built into the exercises for discussion and interactions between students and between students and instructors. The exercises are also adaptable to different situations and time frames. The instructor's manual gives suggestions for adapting the exercises, in addition to a complete supplies list (including some sources), sample lab

format, and suggested answers for questions and/or worksheets. To see the first two chapters of this great new lab manual visit [http:](http://www.brookscole.com/cgi-brookscole/course_products_bc.pl?fid=M20bl&product_isbn_issn=0030225582&discipline_number=22)

Elements of Causal Inference *MIT Press*

A concise and self-contained introduction to causal inference, increasingly important in data science and machine learning. The mathematization of causality is a relatively recent development, and has become increasingly important in data science and machine learning. This book offers a self-contained and concise introduction to causal models and how to learn them from data. After explaining the need for causal models and discussing some of the principles underlying causal inference, the book teaches readers how to use causal models: how to compute intervention distributions, how to infer causal models from observational and interventional data, and how causal ideas could be exploited for classical machine learning problems. All of these topics are discussed first in terms of two variables and then in the more general multivariate case. The bivariate case turns out to be a particularly hard problem for causal learning because there are

no conditional independences as used by classical methods for solving multivariate cases. The authors consider analyzing statistical asymmetries between cause and effect to be highly instructive, and they report on their decade of intensive research into this problem. The book is accessible to readers with a background in machine learning or statistics, and can be used in graduate courses or as a reference for researchers. The text includes code snippets that can be copied and pasted, exercises, and an appendix with a summary of the most important technical concepts.

Bateson named the science "genetics" in 1905-1906. This is the first textbook in English on the subject of genetics.

Promoting the Health of the Community *Springer Nature*

Community health workers (CHWs) are an increasingly important member of the healthcare and public health professions who help build primary care capacity. Yet, in spite of the exponential growth of CHW interventions, CHW training programs, and CHW

certification and credentialing by state agencies, a gap persists in the literature regarding current CHW roles and skills, scope of practice, CHW job settings, and national standards. This collection of contributions addresses this gap by providing information, in a single volume, about CHWs, the roles CHWs play as change agents in their communities, integration of CHWs into healthcare teams, and support and recognition of the CHW profession. The book supports the CHW definition as defined by the American Public Health Association (APHA), Community Health Worker Section (2013), which states, “A community health worker is a frontline public health worker who is a trusted member of and/or has an unusually close understanding of the community served.” The scope of the text follows the framework of the nationally recognized roles of CHWs that came out of a national consensus-building project called “The Community Health Worker (CHW) Core Consensus (C3) Project”. Topics explored among the chapters include: Cultural Mediation Among Individuals, Communities, and Health and Social Service Systems Care Coordination, Case Management, and System Navigation Advocating for Individuals and Communities Building Individual and Community Capacity Implementing Individual and Community Assessments Participating in Evaluation and Research Uniting the Workforce: Building Capacity for a National Association of Community Health Workers Promoting the Health of the Community is a must-have resource for CHWs, those interested in CHW scope of practice and/or certification/credentialing, anyone interested in becoming a CHW, policy-makers, CHW payer systems, CHW supervisors, CHW employers, CHW instructors/trainers, CHW advocates/supporters,

and communities served by CHWs.
