The acoustic design process is very similar to architecture in that it's multidisciplinary and dependent upon nearly every other discipline from HVAC, to plumbing and interior design. However, unlike the other disciplines, it requires a thorough knowledge and understanding of every other discipline to achieve true successful performance.

What to Consider for Acoustics Design

Modern architecture lacks this intricate detailing and has evolved through a rectilinear era and is currently in a curvilinear or amorphous era. The acoustic fallout of these missing scattering elements is

that modern rooms do not have good sound diffusion.

Architecture can also amplify the natural noises around us. These wooden 'Ruurp' megaphones in Estonia's Võru County were constructed in September 2015 to harness the sounds of the forest. Designed by students and planted amongst the trees, the 'bandstands' vary in size and form but, at 3m diameter, they are

the perfect size to climb into.
