... One of the major developments in Earth Sciences in general, and mineralogy in particular, has been the growth of our understanding of the microscopic behaviour of the complex materials that make up the Earth. This has been made possible by advances in our ability to probe minerals at the atomic level, over a large range of pressure and temperature conditions.

Microscopic Properties [approach]: Molecular theory of matter is assumed. Many parameters are required to specify the state of a system. For every molecule, 3-position Coordinates & 3-velocity Coordinates are required. For 1 mole of a gas, $(6 \times 6.023 \times 10^{23})$ coordinates are required. They can't be easily measured. They can't be felt by sense perceptions.

This research aimed at studying the reaction process between cement and asphalt emulsion from a microscopic view and the variations of macroscopic properties with cured time. The microstructure of cement asphalt emulsion (CAE) with a mass ratio of cement to asphalt (C/A) of 0.6 was scanned with SEM and its functional groups were measured with FTIR after being cured for 7 days.
