Integrated Services Digital Network is a set of communication standards for simultaneous digital transmission of voice, video, data, and other network services over the traditional circuits of the public switched telephone network. Work on the standard began in 1980 at Bell Labs and was formally standardized

in 1988 in the CCITT "Red Book". By the time the standard was released, newer networking system with much greater speeds were available, and ISDN saw relatively little uptake in the wider mar

Overview. The steps and principles involved in originating VoIP telephone calls are similar to traditional digital telephony and involve signaling, channel setup, digitization of the analog voice signals, and encoding. Instead of being transmitted over a circuit-switched network, the digital information is packetized and transmission occurs as IP packets over a packet-switched network.
