Ship Collision Risk One of the major accident hazards to which offshore installations are exposed is ship collision. Two of the top 20 largest property damage losses in the hydrocarbon industry

worldwide between 1974 and 2013 have been caused by vessel collisions (Ekofisk in 2009, \$840m; Mumbai High North in 2005, \$480m).

### **Ship Collision Risk - anatec.com**

The present paper focuses on the ship collision risk analyses and the established model for calculation of the collision frequencies for the wind farms. In order to calculate the collision frequencies, issues as ship traffic, navigation routes, geometry of the wind farm and the bathymetry in the area are addressed.

### **[PDF] Ship Collision Risk for an Offshore Wind Farm ...**

The risk for a ship collision is usually predicted to be one of the dominating risks for an offshore installation. The subject of this thesis originated in a need for continuous update and review of the models for assessing the collision risk, so that the technical development and management changes of today are reflected.

### **Ship Collision Risk - An identification and evaluation of ...**

Ship collision poses a severe hazard to offshore installations and the associated risks should be assessed carefully. Historical vessel movement data from AIS transmissions provide a means to analyse vessel movements in the immediate region around a facility and can provide a rich insight into the nature of the traffic.

### **Ship collision risk assessment - turning data into realism**

Rule 7 : Risk of collision. a. Every vessel shall use all available means appropriate to the prevailing circumstances and

conditions to determine if risk of collision exists. If there is any doubt such risk shall be deemed to exist. A famous sentence in the Master's Night Order book was 'Whenever in doubt, call me'.

Apart from developing a RICAS for open sea navigation, the framework presented in Sections 2 Risk-theoretical basis, 3 Operationalizing ship collision risk: theoretical framework, 4 Measuring ship collision risk: method can also be applied to other navigational areas, such as waterways and harbor environments. As found for the presented application, it is advisable to first study the normal operational conditions and empirically derive limit values for the parameterizations.

One class of methods for estimating ship collision risk in sea and waterway areas relies on the detection of near misses or critical encounters in historic ship traffic data. This is one of the application domains of data from the Automatic Identification System (AIS), see Fournier et al. . In recent years, multiple algorithms have been developed for detecting near miss collisions from AIS data, to estimate collision risks in waterway

and sea areas.

### **Towards a Convolutional Neural Network model for ...**

A ship collision accident is one of the most dangerous and common types of maritime accidents. Traditional probabilistic risk assessment (PRA) of ship collision accidents is a methodology that can be adopted to ensure maritime safety.

### **On the Use of the Hybrid Causal Logic Methodology in Ship ...**

In the literature, plenty of researches have been proposed to assess ship collision risk in theory and practice of marine engineering. Distance between ships is a natural measurement of collision risk, since collision occurs if and only if the distance is less than a certain level (Kristiansen, 2013). In order to take the relative velocity into consideration, the CPA based methods, such as distance at closest point of approach (DCPA) and time to the closest point of approach (TCPA), are ...

### **A SVM based ship collision risk assessment algorithm ...**

To assess the risk from ship collisions, a collision energy value of 14MJ has historically been used to represent a collision of a 5000 tonne vessel at a speed of 4 knots [Ref. 2 & 3]. This value is typically used to represent a bounding value of collision energy which an installation could withstand without failure leading to fatalities.

### **SHIP COLLISION: RISK OF STRUCTURAL FAILURE**

A Ship Collision Study is required to assess the hazards arising

from external impacts during the normal operating mode and maintenance, leading to possible loss of containment and asset damage. The overall risk posed to a given facility from ship to platform collisions is dependent on two (2) factors as follows:

In a report released on 1 November 2017 the Navy describes Fitzgerald 's course in the half-hour prior to the collision as running 190T (nearly due south), with a speed of 20 knots (37 km/h; 23 mph). At about 01:17 Fitzgerald 's OOD (Officer of the Deck, responsible for the ship's course and maneuvering) misjudged the course of ACX Crystal. At 01:25 the OOD,

### **MINI SYMPOSIUM: "MS57 SHIP COLLISION RISK"**

Predicting the likelihood of maritime accidents is hindered by the relative sparsity of collisions on which to develop risk models. Therefore, significant research has investigated the capability of non- accident situations, near misses and encounters between vessels as a surrogate indicator of collision risk.
