INTRODUCTION This chapter provides an overview of the engine control

Engine Management Systems

Engine Lubrication System: When two metallic surfaces under direct contact move over each other, they create friction which generates heat. This causes excessive wear and tear of those moving parts. However, when a film of lubricating matter separates them from each other, they do not come in physical contact with each other.

How Does The

Engine Lubrication System Work? Know Here ...

The engine is the heart of your car. It is a complex machine built to convert heat from burning gas into the force that turns the road wheels.

The engine | How a Car Works

- The system must make the assumption that all of the measured air mass does in fact go through the engine and also that the engine can get air from nowhere else other than through the MAF sensor, this assumption does make these systems extremely vulnerable to leaks.
