The Economics of Healthcare - Harvard University

Abstract The functioning of health care depends mainly on the level and method of financing. Countries choose between different models. Bismarck's model is financing based mainly on the contributions that are obligatory for employers and employees, decentralized model of managing and contracting services.

[Health care financing models]

Using data on expenditures and life expectancy by income quintile from the Canadian health care system, I find that universal, publicly-funded health insurance is modestly redistributive. Putting \$1 of tax funds into the public health insurance system effectively channels between \$0.23 and \$0.26 toward the lowest income quintile people, and about \$0.50 to the bottom two income quintiles.

Health Care Financing, Efficiency, and Equity | NBER

Health Financing: The Macroeconomic Level. Financing health care has evolved from personal payment at the time of service delivery to financing through health insurance (prepayment) by the

employer and employee at the workplace. This has progressed in most industrialized countries towards governmental financing through social security or general taxation, supplemented by private and non-governmental organizations (NGOs) (Table 11.3), and personal out-of-pocket expenditures.

Health Care Financing - an overview | ScienceDirect Topics

Health care financing refers to the raising of revenue from individuals in society to support the provision of health care services. Public financing refers to raising the revenues through the public tax system. Financing should be distinguished from delivery. Delivery refers to the actual provision of health

care services.
