Incompleteness for Higher-Order Arithmetic

An Example Based on Harrington’s Principle *Springer Nature*

Gödel's true-but-unprovable sentence from the first incompleteness theorem is purely logical in nature, i.e. not mathematically natural or interesting. An interesting problem is to find mathematically natural and interesting statements that are similarly unprovable. A lot of research has since been done in this direction, most notably by Harvey Friedman. A lot of examples of concrete incompleteness with real mathematical content have been found to date. This brief contributes to Harvey Friedman's research program on concrete incompleteness for higher-order arithmetic and gives a specific example of concrete mathematical theorems which is expressible in second-order arithmetic but the minimal system in higher-order arithmetic to prove it is fourth-order arithmetic. This book first examines the following foundational question: are all theorems in classic mathematics expressible in second-order arithmetic provable in second-order arithmetic? The author gives a counterexample for this question and isolates this counterexample from the Martin-Harrington Theorem in set theory. It shows that the statement "Harrington's principle implies zero sharp" is not provable in second-order arithmetic. This book further examines what is the minimal system in higher-order arithmetic to prove the theorem "Harrington's principle implies zero sharp" and shows that it is neither provable in second-order arithmetic or third-order arithmetic, but provable in fourth-order arithmetic. The book also examines the large cardinal strength of Harrington's principle and its strengthening over second-order arithmetic and third-order arithmetic.

Business Models for Sustainability *Edward Elgar Publishing*

Business Models for Sustainability breaks new ground by combining three important insights. First, achieving sustainability requires socio-technical transitions that entail new technologies, production processes, lifestyles, and consumption patterns. Second, firms play crucial roles in mediating between sustainable production and consumption. Third, radical innovations require organizational innovations and new business models. Peter Wells successfully combines these big picture ideas with rich in-depth case studies drawing on years of accumulated expertise. Highly recommended. Frank W. Geels, University of Manchester, UK and Chairman of the Sustainability Transitions Research Network With increasing awareness that innovative technology alone is insufficient to make sustainable lifestyles a reality, this book brings into sharp focus the need to create radical new business models. This insightful book provides a theoretically grounded but also realistic account of how the design of business models can be a critical component in the overall transition to sustainability, and one that transcends the usual focus on innovative technology. Weaving together key principles and components for business sustainability, the book highlights five very different pathways to the future for sectors ranging from microbreweries and printing through to clothing, mobility and plastics. Business has only just started the first few tentative steps towards a very different approach to creating and sustaining value, but this book concludes that enormous opportunities will emerge alongside new ways of creating and capturing value. Academics and postgraduate students in the fields of sustainable business, business organisations and industrial

ecology will find this book brings a greater understanding of business strategy and structure to the discipline. While traditionally referenced and structured, this academic book is accessibly written with key principles that may also appeal to the consultant community.

Radislav Krstic's case as an example of commander's liability

Abstract: The issue of the military order is a very complex one. When giving or executing an order, one should always take into account the necessity to make choices. The decisions taken may in the future imply criminal liability as a consequence of the order that is contrary to legal norms, or executing it. The purpose of the article is to present the problem of giving an order from the perspective of the crimes committed in the former Yugoslavia, with a detailed account of the R. Krstic's case. The author tried to answer the questions: What is the scope of the commander's liability? Is he liable only for the orders he has given? Does this liability extend to the behavior of his subordinates as well? In the presented article an analysis of selected court cases important from the point of view of the problem of giving an order was carried out. For this purpose, the regulations of International Military Tribunal at Nuremberg were analyzed. Subsequently, an analysis of selected court cases bei

In order to produce a truly cross-cultural approach that advances both theoretical and methodological issues, about half of the volume's chapters team colleagues from different cultures working on a similar cross-cultural research topic. All the contributors focus on recent developments rather than simply reviewing the traditional literature within a specific area. They shed new light on how an employee's role may differ vastly across cultural borders and what this might suggest about specific work practices.

Reading Keys Cengage Learning

READING KEYS - the first in a three-book reading series by Laraine Flemming - offers a comprehensive introduction to reading skills and strategies, from using context clues to identifying

purpose and bias. Clear, accessible explanations present reading concepts without oversimplifying the process of reading comprehension. To ensure students' understanding, reading keys or summaries follow the explanations, breaking them down into manageable chunks. Throughout each chapter, a variety of steadily more difficult exercises assess students' understanding of the material and promote improved comprehension and critical-thinking skills. This incremental approach to instruction and assessment makes it easier for beginning readers to absorb and master new information. The Fourth Edition includes new chapters on analyzing arguments and sentence relationships. In addition, there is a greater emphasis on recognizing and understanding verbal clues to meaning, new discussions on how the brain learns and remembers new information, and several new engaging readings. Fundamentals of Probability: A First Course *Springer Science & Business Media*

Probability theory is one branch of mathematics that is simultaneously deep and immediately applicable in diverse areas of human endeavor. It is as fundamental as calculus. Calculus explains the external world, and probability theory helps predict a lot of it. In addition, problems in probability theory have an innate appeal, and the answers are often structured and strikingly beautiful. A solid background in probability theory and probability models will become increasingly more useful in the twenty-first century, as difficult new problems emerge, that will require more sophisticated models and analysis. This is a text on the fundamentals of the theory of probability at an undergraduate or first-year graduate level for students in science, engineering, and economics. The only mathematical background required is knowledge of univariate and multivariate calculus and basic linear algebra. The book covers all of the standard topics in basic probability, such as combinatorial probability, discrete and continuous distributions, moment generating functions, fundamental probability inequalities, the central limit theorem, and joint and conditional distributions of discrete and continuous random variables. But it also has some unique features and a forward-looking feel.

The Gettysburg Address *Sheba Blake Publishing*

The Gettysburg Address is a speech by U.S. President Abraham Lincoln, one of the best-known in American history. It was delivered by Lincoln during the American Civil War, on the afternoon of Thursday, November 19, 1863, at the dedication of the Soldiers' National Cemetery in Gettysburg, Pennsylvania, four and a half months after the Union armies defeated those of the Confederacy at the Battle of Gettysburg. Abraham Lincoln's carefully crafted address, secondary to other presentations that day, was one of the greatest and most influential statements of national purpose. In just over two minutes, Lincoln reiterated the principles of human equality espoused by the Declaration of Independence and proclaimed the Civil War as a struggle for the preservation of the Union sundered by the secession crisis, with "a new birth of freedom" that would bring true equality to all of its citizens. Lincoln also redefined the Civil War as a struggle not just for the Union, but also for the principle of human equality. Beginning with the now-iconic phrase "Four score and seven years ago"—referring to the United States Declaration of Independence in 1776—Lincoln examined the founding principles of the United States as stated in the Declaration of Independence. In the context of the Civil War, Lincoln also memorialized the sacrifices of those who gave their lives at Gettysburg and extolled virtues for the listeners (and the nation) to ensure the survival of America's representative democracy: that "government of the people, by the people, for the people, shall not perish from the earth." Despite the speech's prominent place in the history and popular culture of the United States, the exact wording and location of the speech are disputed. The five known manuscripts of the Gettysburg Address in Lincoln's hand differ in a number of details, and also differ from contemporary newspaper reprints of the speech.
